ROU DETAIL

➡ ***CIV Coverage Report Enhancements***

The CIV coverage reporting has been enhanced with the following:

- The report no longer exists in the Historical Reporting section of SIS (668). This change was made to eliminate confusion with manpower analysis caused by viewing out of date information.
- The report option is now located directly on the Print Report Menu in SIS and not under the Contract Reports option.
- An option now exists to print the summary sheet only when requesting the report.
- The manpower calculation of 8 CPD (calls per day) for selling reps and 7 CPD for retail reps has been changed to allow modification to CPD parameter for various manpower analysis calculations.

Program Contact: Chris Minner, extension #1642

➡ ***Datagrabber Function in SIS***

The "Datagrabber" function in SIS is being replaced with a new function called "PF5 Dload" currently available from the "M03 Scroll List" in SIS. The datagrabber and download option produce the same results.

The only difference is that datagrabber is on-line and instantaneous while the new download function spreadsheet is sent to you via e-mail. This change is being made to support the Windows 95 platform that will be installed in 1997 along with cost savings of computer time due to on-line charges versus the new batch process computer charges. Datagrabber access will be discontinued on Monday, December 2, 1996.
